EDUCATION

University of Georgia <i>B.S. in Computer Science, Minor in Mathematics</i>	Athens, GA May 2028
Kennesaw State University <i>B.S. in Computer Science, Minor in Mathematics GPA: 4.0</i> • Coursework: OOP, DSA, Computer Org., Operating Systems, Database Systems, Data Comm.	Kennesaw, GA Aug. 2024 - May 2026

EXPERIENCE

Incoming Software Engineer Intern <i>Fiserv</i>	Jun. 2026 - Aug. 2026
Data Engineer at Data for Good <i>JPMorganChase</i> - Selected from 1,000+ applicants to represent KSU at JPMorganChase's Data for Good Hackathon, building data-driven solutions for a nonprofit organization. - Accelerated affordable housing acquisition workflows for a Fort Worth housing nonprofit by building a natural language (NLP) query interface that cut lot evaluation time by 95%, enabling boards to assess 20–40 properties per cycle without manual dataset research.	Apr. 2026
Software Engineer Intern <i>XR DOJO</i> Building backend features for ATL Quest using Next.js and related web technologies.	Apr. 2026 - Present
Undergraduate Researcher <i>Kennesaw State University</i> - Evaluated ML models using precision, recall, and cross-validation across classical, neural, and text-based approaches. - Expanded NLP experimentation across attention-based, transformer, and BERT models by implementing and fine-tuning architectures for downstream tasks. - Built lightweight RAG evaluation pipelines by testing retrieval, chunking, and hallucination patterns to separate retrieval error from generation error.	Jan. 2026 - Apr. 2026
CCSE Lab Tutor/Assistant <i>Kennesaw State University</i> - Supported 350+ students in Java and Python labs by mentoring through debugging and core programming concepts. - Resolved 20+ programming bugs weekly, helping an average of 25 students complete assignments on time through targeted debugging support.	Aug. 2025 - Apr. 2026

PROJECTS

Custom Unix Shell C, Shell <i>Personal Project</i> - Built a Unix shell in C supporting 6 core features (I/O redirection, pipes, background processes, and built-in commands) by implementing fork, execvp, dup2, and pipe system calls from scratch. - Maintained shell responsiveness across 100% of commands by eliminating zombies with signal handler.	Mar. 2026
Hexbear React, TypeScript, SQL, Shell <i>UGAHacks Hackathon</i> - Led a 3-person team to build a gamified climate-action app using React Native, TypeScript, and Supabase. - Classified 7 plastic resin codes and 6+ material types with 93% accuracy by combining Google Cloud Vision with a weighted-keyword scoring algorithm. - Surfaced 20+ nearby food-donation sites within a 10+ mile radius by integrating Google Places API and haversine-distance sorting.	Feb. 2026
Movie Recommendation Website Python, HTML/CSS, JavaScript, Shell, SQL <i>Personal Project</i> - Delivered 10 movie recommendations by processing 4,800+ records with Pandas and vectorized cosine similarity in Scikit-learn. - Reduced average response time by 91% by building 11 Flask REST endpoints with optimized authentication flows.	Sep. 2025

SKILLS

- **Languages:** Python, Java, JavaScript, Shell, HTML/CSS, C/C++, SQL, TypeScript, R, C#
- **Software:** Git/GitHub, Cursor, Claude, Codex, Docker, Google Cloud, Supabase, AWS, Colab, Firebase
- **Libraries and Frameworks:** Pandas, Scikit-learn, Flask, Tensorflow, Next.js, React
